6. Interpretation Guide

- Availability status describes whether a service is reachable and usable.
- Response class describes response-time behavior, not availability.
- Older snapshots may show UNKNOWN or null response class because response-time classification was added after the initial watcher release.
- This custom range report is independent observation material and not an official DAC service status page.

Status & Response-Class Glossary

Status / Class	Meaning
HEALTHY	The endpoint or overall infrastructure state is reachable and behaving as expected.
DEGRADED	The endpoint is reachable, but one or more checks or response-time indicators show reduced quality.
PARTIAL_OUTAGE	At least one monitored endpoint is unavailable or failing while other endpoints remain reachable.
UNHEALTHY	The endpoint failed required checks or did not provide usable responses.
FAST	The observed response-time class is fast for this watcher context.
MODERATE	The observed response-time class is acceptable but not fast.
SLOW	The observed response-time class is slow and may indicate degraded user experience.
UNKNOWN	The watcher could not classify the response-time state, often because older snapshots did not include this field.
N/A	Not available or not applicable for the selected observation, endpoint, or historical snapshot.
