7. Interpretation Guide

- Window A represents the earlier observation segment.
- Window B represents the later observation segment.
- For availability score, higher is better.
- For response time, lower is better.
- Older snapshots may show N/A or UNKNOWN response classes because response-time classification was added after the initial watcher release.
- This comparison report is independent observation material and not an official DAC service status page.

Status & Response-Class Glossary

Status / Class	Meaning
HEALTHY	The endpoint or overall infrastructure state is reachable and behaving as expected.
DEGRADED	The endpoint is reachable, but one or more checks or response-time indicators show reduced quality.
PARTIAL_OUTAGE	At least one monitored endpoint is unavailable or failing while other endpoints remain reachable.
UNHEALTHY	The endpoint failed required checks or did not provide usable responses.

Status / Class	Meaning
FAST	The observed response-time class is fast for this watcher context.
MODERATE	The observed response-time class is acceptable but not fast.
SLOW	The observed response-time class is slow and may indicate degraded user experience.
UNKNOWN	The watcher could not classify the response-time state, often because older snapshots did not include this field.
N/A	Not available or not applicable for the selected observation, endpoint, or historical snapshot.
